

报告题目: Producing circle patterns via configurations 报告人:周泽 (湖南大学) 时间: 2020-10-21 星期三 9:00-10:00 地点: 腾讯会议 ID: 456 901 367, 密码: 24680 报告摘要:

In this talk we will investigate circle patterns from the viewpoint of configurations. By using the topological degree theory, we extends Koebe-Andreev-Thurston Theorem to include circle patterns with obtuse exterior intersection angles. As a consequence, we obtain a generalized Andreev's Theorem which allows obtuse dihedral angles.
